

Catch Basin & Storm Sewer Cleaning

Minimize overflows and odor with a clean, well-maintained storm sewer system.

As communities age, grease, leaves, mud and road debris build up on your catch basin walls and eventually fall off in large clusters, causing obstructions and backups in the connecting pipelines.

- Atherton Plumbing will map each catch basin (beneath manholes, curb gutters or grates).
- Starting at the highest elevation, we use advanced hydro-jetting to flush the basin and the connecting storm sewer lines.
- This ensures smooth drainage of wastewater, prevents street flooding and helps individual home basements from flooding.
