

Traditional & Tankless Hot Water Heaters

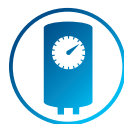

Atherton Plumbing has provided hot water heater repair, maintenance and replacements to central Ohio's residential and business communities for over 65 years. Whether you need a repair, an eco-upgrade or a complex industrial installation, we're here for you.

Signs of water heater problems

Keep your water heater reliable by making repairs right away.

- Fluctuating water temperatures
- Longer time to heat water
- Higher electric bills
- Boiling or clanking noises
- Gas pilot won't light
- Water leaking from the base
- Rust build-up in tap water
- Showers or bathtub streaks
- Laundry stains

Residential & Commercial Services

Atherton Plumbing will help assess your hot water issue, determine whether you need a repair or replacement, and find the right solution for your property and budget. You can trust us to:

- Fix leaks and drips
- Replace elements and thermostats
- Perform regular maintenance and flushing
- Assess corrosion, mineral deposits and sediment and make repairs if necessary
- Check pressure and test relief valves
- Install new water heater systems

We also provides service and installation on boilers, point-of-use heaters, and instant hot water dispensers for fast sink-side service.

We work with all kinds of water heaters

- Conventional storage tank
- Tankless (unlimited hot water)
- Heat Pump
- Boilers
- Point-of-Use
- Sink-Side Dispensers
- Hybrid systems

And more. Should you happen to need a new one, we also help you determine which is best for your home and budget.

Installation is not your average DIY project

You need plumbing, electrical, gas supply, heating, ventilation and carpentry skills. You also need to know state and local building codes, obtain a permit for the work and arrange with your municipality for an inspection of the work.

Ohio winters take a toll on water heaters

When the temperatures drop, your water supply, pipes and fixtures also cool. Metal water heater units, in particular, will expand and contract. These stresses will not only will make water take longer to heat, the water heater itself can get damaged and eventually leak.

Annual Maintenance is critical.

Damage to your water heater can happen more often if 1) you have an older water heater, 2) the unit is placed in an unheated area of the home, or 3) there is a high sediment content in the water heater.

Call Atherton Plumbing for annual maintenance to ensure reliable hot water all year.

Benefits of Tankless Water Heaters

Conventional tanks eventually run out of hot water, then take a long time to heat up another tank. With a tankless system, water heats instantaneously – on demand – and never runs out no matter how long your shower. Benefits of this environmentally-friendly tankless system includes:

- Up to 40% energy savings
- Life span of 20 years or more
- Significant space savings
- Unlimited hot water
- Lower greenhouse gas emissions
- Precise temperature control
- Reduced risk of flooding
